

HELPING STOP THE SPREAD OF GERMS

Thanks to **COVID-19**, we're more aware than ever about the need for disease prevention through proper handwashing, practicing careful hygiene and avoiding cross-contamination. T&S offers a range of products to encourage effective handwashing and help prevent the spread of germs.

SENSOR FAUCETS

- **Prevent contamination** from bacteria-laden faucet handles with hands-free operation
- **Save water and money** with reduced water usage
- Use in almost any operation with a **variety of body styles, mounting choices and power options**
- **Retrofitting** manual faucet installations to sensor faucets is quick and easy

KNEE AND FOOT PEDAL VALVES

- **Control water flow** by knee- or foot-operated valves
- Release the valve and **water stops automatically**
- Combine the simplicity of manual faucets with the benefits of **hands-free operation**

ANTIMICROBIAL COATINGS

- **Inhibit the growth of microorganisms** with clear antimicrobial coatings
- **Prevent the spread of germs, bacteria and fungi** with reduced cross-contamination
- **Retrofit T&S manual faucets easily** with wrist blade, lever or 4-arm antimicrobial handles
- Designed and intended to **last the life of the product**

OUTLET DEVICES

- Install an outlet device that **doesn't draw air into the water stream** and is free of possibly contaminated airborne germs that can be introduced by aerators
- Choose from laminar flow or non-aerated **outlet device options**
