

WATER IS NOT JUST WATER

Water conservation is more important than ever – but did you know that water costs aren't simply based on how much water you use?

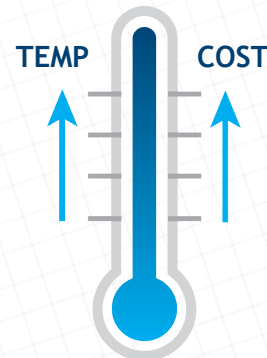

There are also **ASSOCIATED ENERGY COSTS** (for tempered water) and sewage costs for every drop of water used.

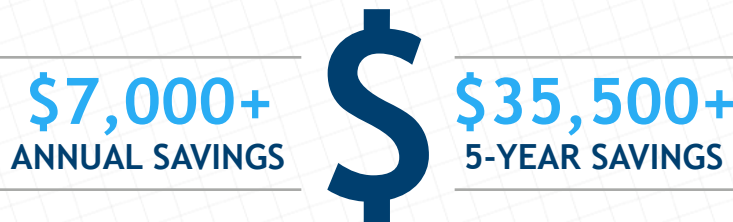

Energy/heating costs are typically **9x THE COST** of water, and sewage is typically **1.5x THE COST** of water.

INCREASED TEMP = INCREASED COST

For every **1-DEGREE** Celsius rise in water temperature, **ENERGY COSTS INCREASE BY . . . 2.5%**

Making the switch to T&S aerators and low-flow spray valves:

Assuming U.S. average water, sewage and energy costs.

Can your facility afford to pass on savings like these?
