

Finding Success with T&S:

Industrial Taylor – Bogotá, Colombia

Industrial Taylor, a prominent food manufacturer in Colombia, has embarked on a transformative journey towards sustainability by aligning with brands that share their vision. Among these brands, T&S Brass emerged as a frontrunner, providing innovative, water-efficient products that align perfectly with Industrial Taylor's commitment to minimizing its environmental impact.

Background

Industrial Taylor is a food manufacturer, making delicious ice cream that is sold across Colombia. But Industrial Taylor also leverages its foodservice industry knowledge to function as a foodservice equipment dealer, working with more than 100 brands throughout Latin and South America.

As a dealer, Industrial Taylor has worked with the T&S Brass brand for more than 15 years. But when Industrial Taylor began looking for brands to align with its renewed focus on sustainability, T&S rose to the top.

An environmental responsibility

Industrial Taylor is serious about reducing its ecological footprint and is dedicated to educating others on the importance of sustainable practices in the foodservice industry. They believe products and services should have a minimal impact on the environment not only for the potential cost savings and regulatory compliance but also to ensure the health and preservation of our planet.

Installing low-flow products

Low-flow faucets can reduce water flow by as much as 30%. Recognizing the substantial water savings that can be achieved, Industrial Taylor decided to install T&S Brass products, specifically low-flow faucets, throughout its facilities. With six kitchens and numerous restrooms in their processing facility and training center, the

implementation of T&S low-flow faucets and pre-rinse units has resulted in significant water flow reductions for the company.

Continuing education on sustainable practices

Industrial Taylor's training center plays a pivotal role in disseminating knowledge on sustainability within the industry. They have created an informative display showcasing the comparison between high-flow and low-flow faucets, allowing customers to witness the tangible difference.

"Industrial Taylor wants to showcase how sustainability and savings go hand-in-hand and that incorporating low-flow faucets and pre-rinse units can be an effective strategy for cost savings."

— Roberto Gogin
MerkoLAT business development manager

Going blue to go green

T&S Brass, a brand committed to sustainability for more than four decades, has been instrumental in Industrial Taylor's journey. T&S' pioneering efforts in creating its first low-flow spray valve in 1976 paved the way for water, energy, and cost conservation. Today, its team of design engineers continues to develop innovative, industry-leading, water-efficient products, further cementing the brand's position as a trusted partner for sustainable solutions.
